Issues Installing CWorks in Windows Vista (SQL Version)

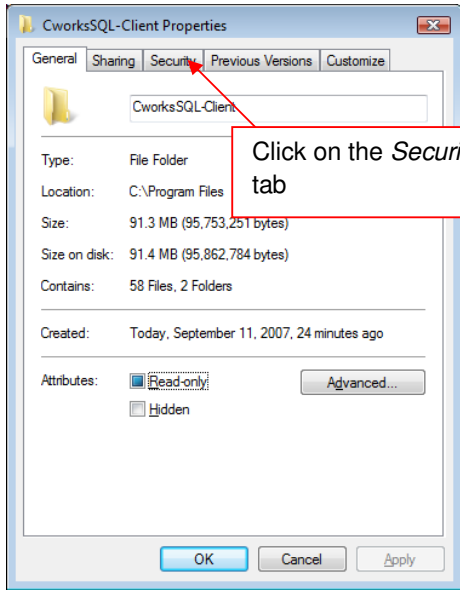

For computers running Windows Vista there is a issue installing new software in the Program Files folder where the default setting for folder is set as read only. Users need to configure the installation folder manually. Below is the steps to change the settings for the folder.

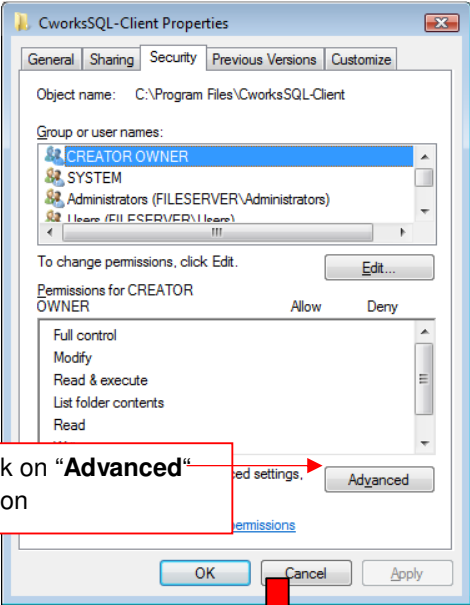

- 1) Open windows Explorer or My Computer
- 2) Browse to Program Files folder (default installation location `C:\Program Files\CWorks-Client\`)

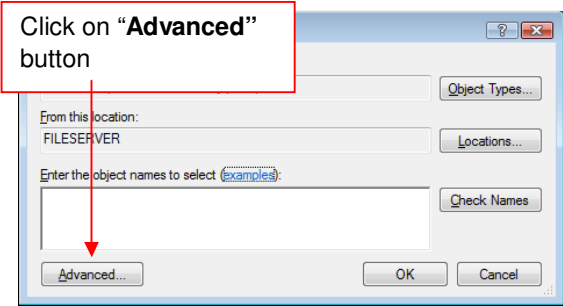

- 1) Right click on the folder
- 2) Then click on *Properties*

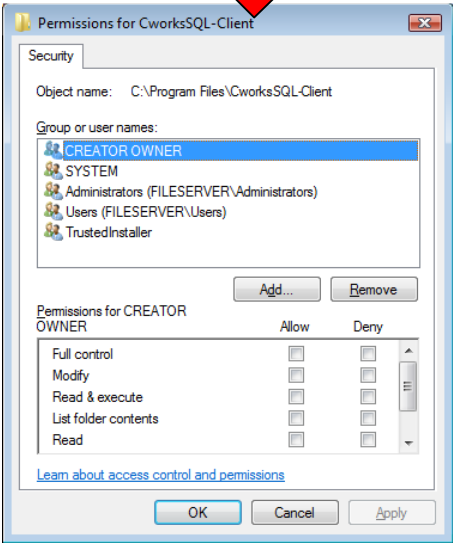

Click on the *Security* tab

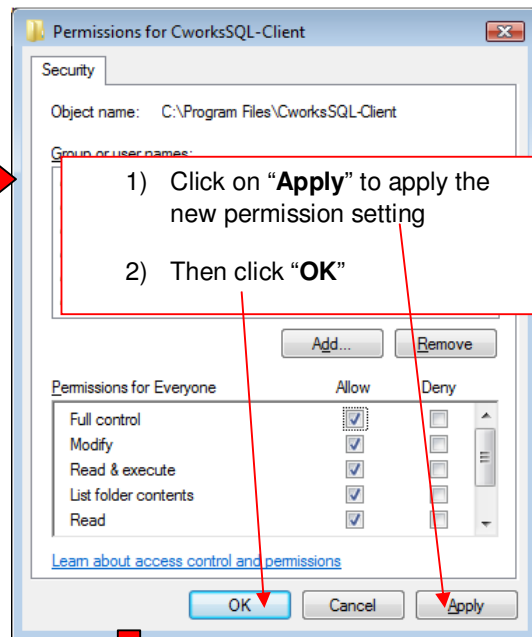

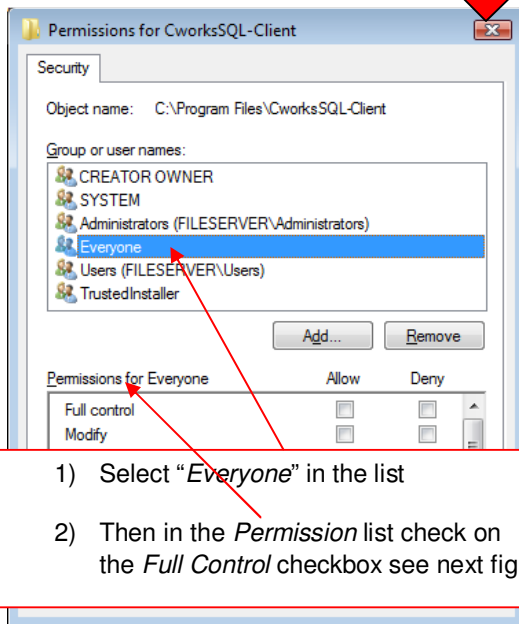

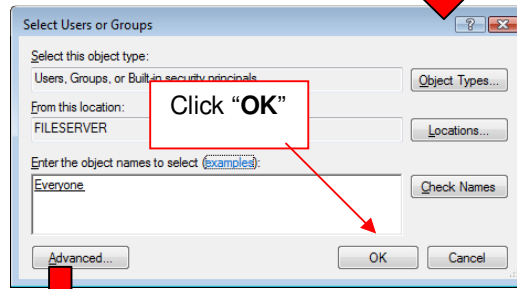

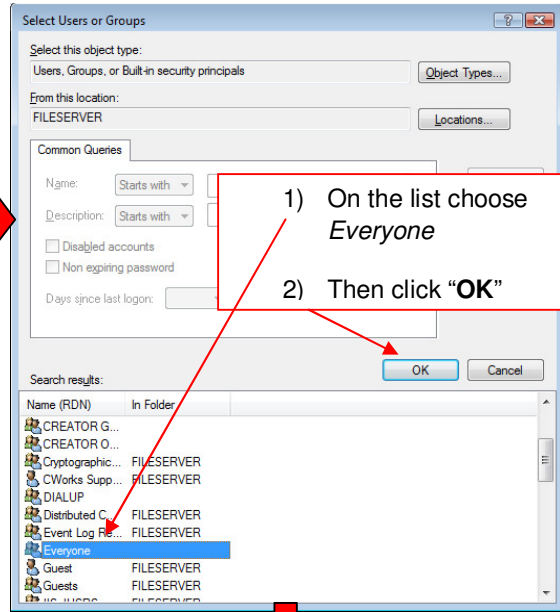

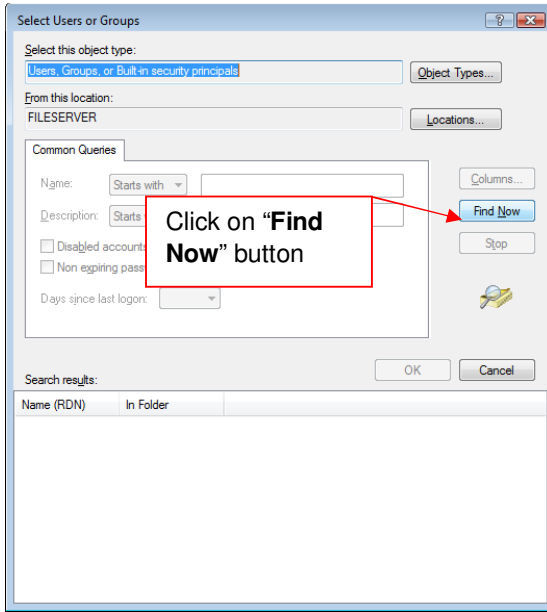

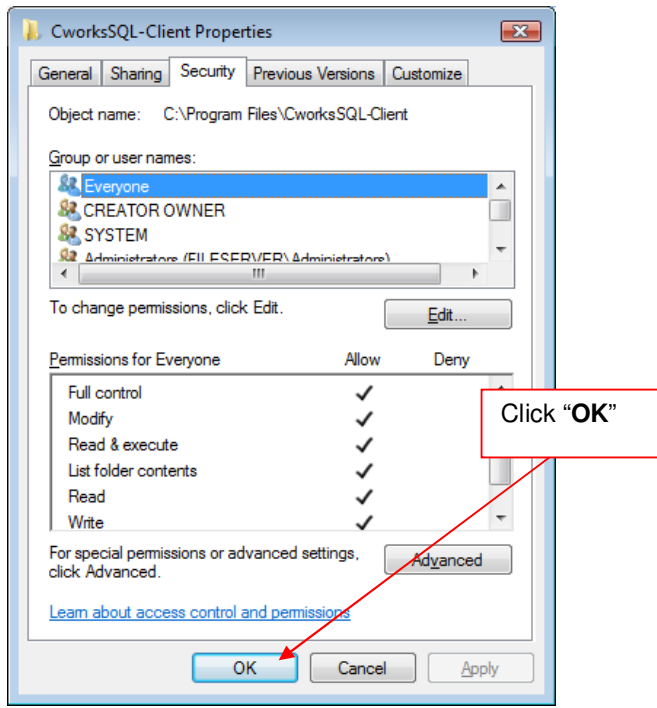

Click on "**Advanced**" button

Click on "**Advanced**" button

Once the security is set as Full Control users can now run the CWorks in Normal mode.
